FITBOX

The flexible freestall divider by Spinder

Animal friendly, flexible and durable

The flexible Fitbox made of glass fiber takes cow comfort to a higher level and as a result ensures a longer productive life. If a cow contacts the freestall divider when lying down or standing up, the divider flexes with the cow and pushes back against the cow. Not annoying or stressful, but pleasant

**“Flexing for
vitality and
comfort”**

The benefits of comfort | spinderdhc.com

“The latest in cow comfort”

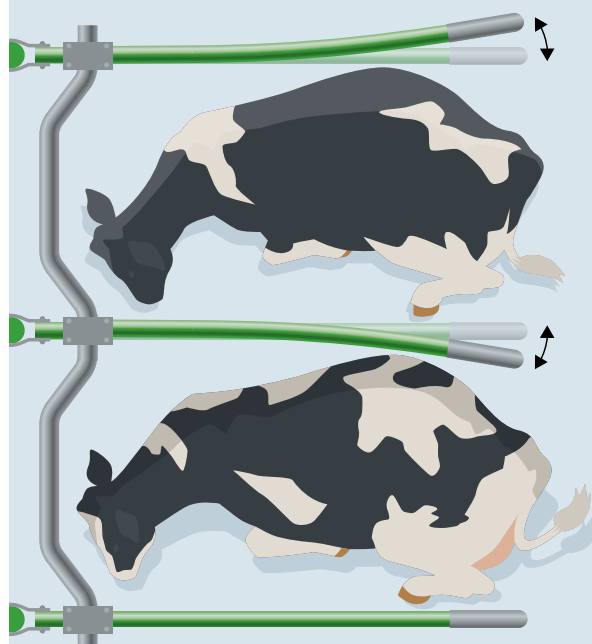

The name Fitbox tells in one word the story of the flexible freestall divider by Spinder.

Being fit is important, also for a cow. The farmer who chooses the Fitbox will discover that his animals experience more comfort. The Fitbox therefore helps to improve the productive life of the herd. Always the right fit, to keep your cows fit!

The fiberglass is somewhat more flexible than steel; the Fitbox flexes a little, but also pushes back. The cow is motivated to stand and lie straight, but the contact with the cubicle is slightly more friendly for the cow. Older cows in particular will appreciate this.

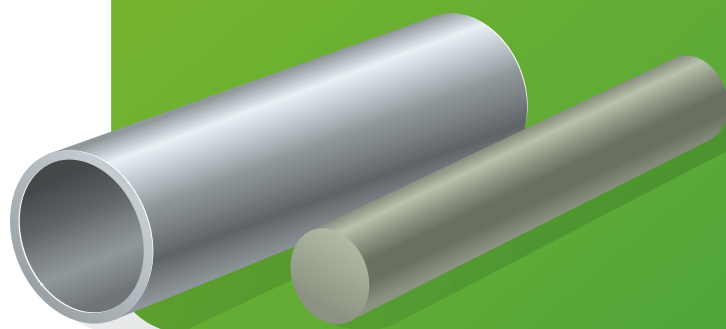

The flexibility contributes to the stall's robustness and ensures years of lying pleasure. The relatively slim rods allow for a straightforward design that leaves as much room as possible for the cow. And that's what it's all about.

Flexibility Fitbox

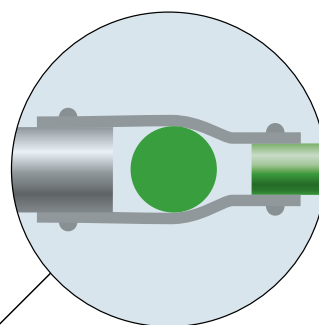

“In addition to flexibility, the difference in material also provides an enormous amount of space in the cubicles”

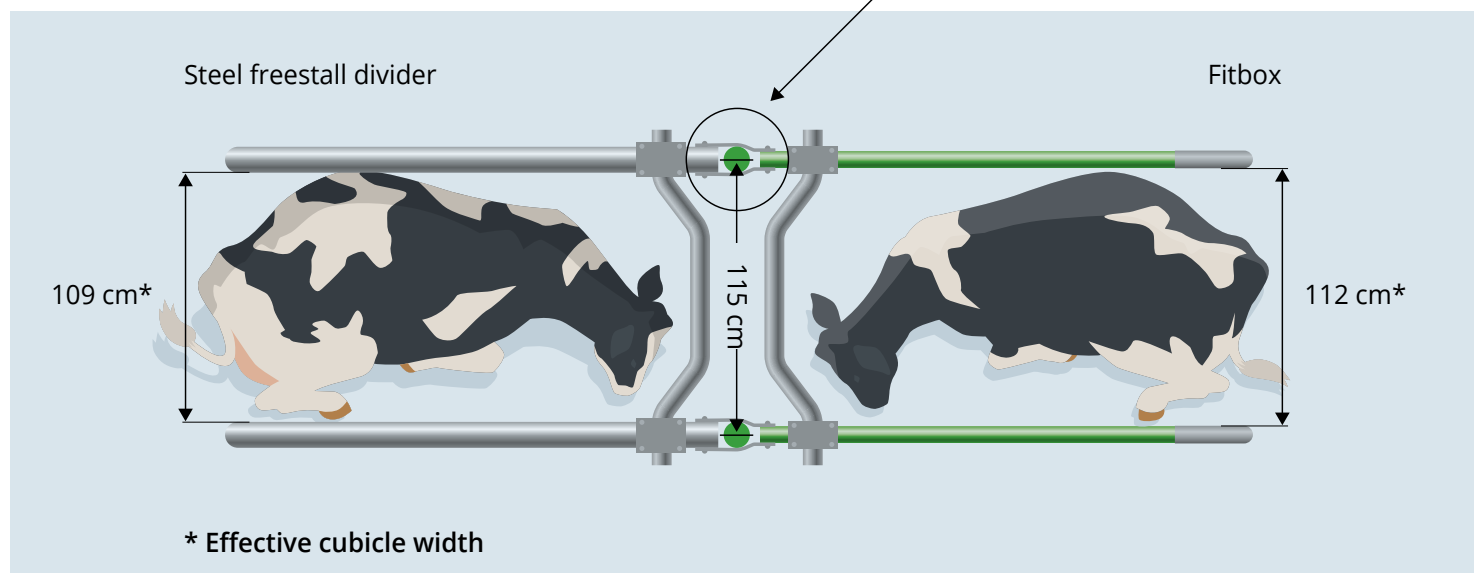

Steel tube diameter \varnothing 6 cm
Fiberglass rod diameter \varnothing 3 cm

Thanks to the slim profile, the space is used to an optimum and the cow has more room. At the same time, the slim profile provides the farmer with a better overview of his barn; after all, there is less material in sight. When using the Fitbox for renovation, the effective cubicle width is increased by 3 centimeters while maintaining the same center-to-center distance of freestall dividers.

Example situation cubicle width center to center - 115 cm

The Fitbox is a combination of glass fiber (solid 3 cm), a steel connecting part and steel clamps. It can be applied to various types and sizes of cubicle decks and covers. For a modern Holstein cow Spinder recommends a cubicle width of 120 cm, but thanks to the slim profile of the Fitbox 115 cm can also be appropriate.

The Fitbox can be equipped with a waved neckbar and a knee rail, just like any other freestall divider. A waved neckbar guides the cow straight into the cubicle, a knee rail ensures the correct lying length setting.

The unique concept of the fitbox: by using a slim flexible freestall divider we achieve more comfort and more space. Fitbox - always the right fit!

Different!

Spinder has been an authority in the field of dairy housing equipment for almost 50 years. Our freestall dividers made of curved steel are functional, unique and robust. The range is now being expanded with fiberglass dividers. A type of freestall divider with more than 15 years experience. Fiberglass dividers are also functional, unique and robust, but also have more positive features.

- Cowfriendly
- Flexible
- Durable
- More room for the cow
- Always the right fit
